

AUeReqDI R1 for Draft for community comment

The AU eRequesting Data for Interoperability (AUeReqDI) is available at https://sparked.csiro.au/index.php/sparked-products-resources/aueregdi/aueregdi-release-1/

Sparked is seeking feedback on the following areas

- Suggestions for improvement in the data groups or elements in AUeReqDI R1 Draft for Community Comment, including Data groups and data element definitions and examples of code sets used by vendors and implementers to communicate data element scope
 - 1. is the clinical content is correct e.g. data element names and descriptions,
 - 2. is the metadata is appropriate e.g. use and misuse
 - 3. is there anything missing or inappropriate?
 - 4. are there issues with the use of terminology (code system and value set) of the data elements
- 2. Suggestions for additional data elements that are not yet in the backlog and why?
- 3. Are there significant barriers to development, implementation, or use for any of these data elements in AUEReqDI R1 Draft for Community Comment that warrant a change in definition, or removal?
- 4. Suggestions around additional use cases and data groups/elements to support those use cases to go on our roadmap
- 5. General feedback on the document including
 - o additional references
 - o additional information to provide greater clarity or context around the AUCDI and its use
 - o additional national standards and initiatives we should be considering

Feedback guidelines

- For changes and new content requests to the AUeReqDI content, please provide clear justification, use cases and
 references providing more detail will assist the Sparked team in understanding the nature and context of your
 requirements. The justification will also aid in assessing the risks and benefits that are associated with making the
 change.
 - If there are similar data elements available already, please provide justification why a new suggested data element is required and the use cases that it supports
- For each data group, please provide an overall recommendation
 - If your answer is "Major revision" or "Reject", please make sure you let us know why in the feedback sections

Sparked welcomes information that identifies the healthcare community's preferences and priorities for informing further investigation.

Target audience of review: Reviews are accepted from all interested stakeholders. Digital health or clinical expertise is not required to provide comments - we encourage contributions from all unique points of view as the collaborative review process is intended to be inclusive of all points of view and not requiring specific skill sets or professional background.

AUeReqDI R1 Draft for Community Comment is open for feedback until 14 June

* Required

Thank you for your time.

9

Do you have any general feedback? Specific feedback for data groups and elements can be provided in later questions. *

This include

- additional references
- additional information to provide greater clarity or context around the AUeReqDI and its use
- additional national standards and initiatives we should be considering

Overall recommendation *

Accept - if you have no suggestions for further improvement and consider the data group ready for publication without further review or if the suggested changes are trivial (e.g. spelling)

Minor revision - if you consider that there are only small changes required to make the data group ready for publication

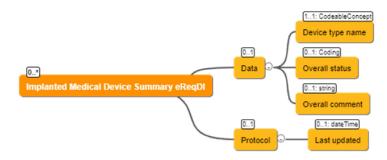

Major revision - if you consider the data group needs large or significant modifications such as addition/removal of data elements

Reject - if you consider the data group is not suitable for publication - for example that it is "unfit for purpose" or fundamentally flawed.

Abstain - if you feel you need to deliberately refrain from participating in the recommendation process - we encourage you to contribute from your unique point of view as the collaborative review process in intended to be inclusive of all points of view and not requiring specific skill sets or professional background
