

Minutes – Clinical Design Group Online Meeting 8

Meeting Details		
Date 9 December 2024		
Time 1:00pm – 2:30pm AEST		
Location 🛛 Virtual		

Meeting Overview				
Agenda Items	 Acknowledgement of country AUCDI Release 2 Chronic Disease Proposals Outputs from the CDG Chronic Disease Management 			
	 Workshops 3. Requirements for data groups to support real-time shared care planning and chronic disease management 4. Upcoming meetings 			

Discussion Summary				
Discussion Summ AUCDI Releases	 AUCDI Releases Release 1 has been completed, ee are now working on Release 2 and are iteratively growing this As part of Release 2, patient summary has been put out for community review, and we are now focusing on chronic disease management and reason for encounter AUCDI Patient summary released for community comment at the end of November and the review period closes Friday 17 January 2025. This release can be found on the <u>Sparked website</u> Patient Summary There have been three AU Patient Summary Clinical Focus Group (AU PS CFG) meetings where they have defined five consumer journeys; interstate GP visit, emergency hospital attendance, referral to specialist and allied health, hospital to aged care interstate journey, and pre-operative surgical journey The AU Patient Summary FHIR IG Project Team (AU PS FHIR IG PT) have nominated three consumer journeys (bolded above) 			
	 for their development over the coming months Aim to have patient summary consumer journeys published by end of January 2025 			
AUCDI Release 2 Chronic	Chronic Disease Management Data Group Prioritisation			

Disease Proposals	 Data group prioritisation activity at the September face-to-face CDG meeting highlighted the data groups to focus on, some of which will be deferred to the technical design group or will be aligned with pre-existing national standards Social emotional wellbeing is a priority however is not being pushed for this release to allow for collaboration with existing work and relevant stakeholders New data groups for AUCDI Release 2 chronic disease management are social determinants of health (SDOH), interventions, goals, health concerns, follow up, and social history (health behaviours)
Health	Tobacco Smoking Summary
Behaviours	 The Release 1 model includes the overall status and last updated Data elements within the tobacco smoking summary proposal will be the focus for Release 2 Potential future models There is a potential model surrounding smokeless tobacco which can be looked into at a future time. Smoking and smokeless tobacco have been separated as they have separate behaviour changes Passive smoking would be recorded within an exposure summary as this is not considered a behaviour or a habit of direct use Proposal for a more generic pattern around readiness for change where triggers, readiness for change, recontemplation and the contemplation cycle, barriers to change. Frequency of smoking (how much a person smokes on a daily, weekly basis) can be recorded in the form of a smoking diary New data elements for the tobacco smoking summary include per type group, type, status, typical use (units), typical use (mass), comment, overall quit date, overall years of smoking, overall pack years, overall comment Group discussion Further work can be done towards creating episodes (e.g. someone was pregnant and did not smoke at all) to accommodate for a start-stop cessation however this is in further detail than what is being worked on currently The smoking diary can be utilised to record smoking patterns however, this is a different model to the tobacco smoking summary The tobacco smoking summary The tobacco smoking summary
	years) are for future consideration and focus is on producing a summary of information

- Vaping is not included in this model as it is not tobacco smoking. Vaping requires further identification of the chemicals the consumer is being exposed to, not just the fact they are smoking an e-cigarette
- Menti Vote
 - Do you agree with the proposed model for the tobacco smoking summary?
 - Agree with proposal 23
 - Agree with proposal but with minor changes 2
 - Disagree 0
 - Abstain 5
 - <u>Decision: Proceed with the proposed model for the</u> tobacco smoking summary

Alcohol Consumption

- The proposed data model is very simple and mirrors what we started with within the tobacco smoking summary
- The data elements within the proposed data model are overall status, overall comment, and last updated
- Menti Vote
 - Do you agree with the proposed model for the alcohol consumption summary?
 - Agree with proposal 22 (including additional vote not counted within the Mentimeter)
 - Agree with proposal but with minor changes 0
 - Disagree 0
 - Abstain 5
 - <u>Decision: Proceed with the proposed model for the</u> <u>alcohol consumption summary</u>

Substance Use

 Summary information about individual's typical pattern of use of a specified substance or a class of substances that might harm an individual's health or social wellbeing 			
 Substances that fall within the scope of this data group include harmful or potentially addictive substances as well as medications that are misused. It does not include tobacco, vaping or alcohol, as these are separate data models 			
The data elements within the proposed model include			
substance name, c	overall status, overall comment, last updated		
Group discussion			
 It is propos substances 	ed that there would be a valueset to identify by name		
 Medication 	misuse may involve administration without		

- This model starts at the basics and as a result it does not currently include an 'episodes' data element however, this is in the roadmap
- People may be taking a substance, however, don't have a definitive knowledge of what the substance is (e.g. illicit drugs)
- Menti Vote
 - Do you agree with the proposed model for the substance use summary?
 - Agree with proposal 21 (including additional vote not counted within the Mentimeter)
 - Agree with proposal but with minor changes 0
 - Disagree 0
 - Abstain 6
 - <u>Decision: Proceed with the proposed model for the</u> <u>substance use summary</u>

Goals

- There has been a push for goals can be recorded and to be recorded by the consumer or the clinician
- The data elements within the proposed model include goal name, goal description, clinical indication, start date, proposed end date, actual end date, outcome, comment, last updated which will be recorded once per goal
- Group discussion
- Common goals may be coded however, it is unlikely that a full list of goals would ever be developed so consideration for both data enabled and free-text options to address all relevant substances Certain groups may have specific goals that they want coded; you may be able to collect a list to work for your specific use cases • It is challenging to fully code because it is a combination of both clinician and consumer goals There is further discussion around who records goals however, for the moment you will be able to see the author in a health record • We want to ensure that consumers can define their own goals rather than just having clinician-initiated goals • The current focus is on individual goals in the electronic health records - population data is currently out of scope • There is capacity to have targets within goal setting however, there is not currently a sub-goal data element within an overall goal. This may be something to consider in the future

	0	Goals do not have to be related to disease as it is optional to have a clinical indication
	0	There would be value in capturing goals relating to overall wellbeing, and this data can be used to help the
		overall betterment of the community
	0	The SDOH data elements may have goals we are aiming
		for regarding wellbeing and intervention
	0	An at-risk field could be used to describe the clinical
		indication of a goal
	0	Goals will eventually sit under a care plan in addition to
		standalone goals, and will have orders or instructions to carry out the care plan and record the outcomes for each activity
	0	There's an assumption that goals added to patient
	Ũ	record are agreed upon by both the clinician and the
		consumer, although these may be largely consumer
		driven
	0	A dual approach of structured options with space for
		free text could help document social prescribing goals
	0	Goal-setting can be nuanced and complex however, at
		this stage we need to start broad to develop a
		foundation which can be built upon and confined into
	0	various directions
	0	Add an additional 'goal setter' data element to record who is driving the goal
	0	A data element defining how to achieve the goal needs
	-	further determination on its data structure and will be
	0	captured in the backlog Explore how determining how to achieve goals fits
	0	within care plans and who determines when it is
		considered 'achieved'
•	Menti	
	0	Do you agree with the proposed model for goals?
		 Agree with proposal – 13
		 Agree with proposal but with minor changes – 9
		 Disagree – 0
		 Abstain – 2 Decision: Proceed with the proposed model for cools
	0	Decision: Proceed with the proposed model for goals
Health	Issue	
•	A heal	th issue is any concern or worry that can negative affect
		ividual's physical, mental, or emotional well-being or
	quality	
•	• •	es things that don't fit formal problems/diagnoses
•	The da	ta elements within the proposed model include issue
	name,	description, date of onset, last updated

	 Potential future data groups include symptom and recommendation Group discussion Defining the type of issue (e.g. physical, mental, psychological) could be an additional data element added to the backlog Add 'status' data element to the backlog to address resolution/end date/description of the severity of issue This is intended to document concerns or worries however, further discussion can be had around developing something higher-level which is more neutral, for example health consideration. This can be added to the backlog Menti Vote Do you agree with the proposed model for health issues? Agree with proposal – 10 Agree with proposal but with minor changes – 5 Disagree – 2
	 Abstain – 4 Decision: Proceed with the proposed model for health
	 issues Minor changes around language
Upcoming	Upcoming meetings
	, 0 0
Meetings	• 23 January 2025 (online)
	• Face-to-Face CDG in Adelaide – 19 February 2025
	 More information about tickets will be shared in the near future

Decision Log				
Do you agree with the proposed data model for the tobacco smoking summary?	Majority voted to proceed with the proposed data model	Z3 23 Agree with proposed 5 Agree with proposed but with minor charges 5		
Do you agree with the proposed model for the alcohol consumption summary?	Majority voted to proceed with the proposed data model	Alcohol consumption summary 21 21 Agree with proposed Agree with proposed but with Proposed but with Disagree Abstain		

	Do you agree with the proposed model for the substance use summary?	Majority voted to proceed with the proposed data model	Substance use s	summary		6
				0	0

Actions	Actions				
ID	Description	Responsible			
2024129-1	Share any definitions on what a health consideration/matter All CDG Members				
	might be to help differentiate this from a health issue				
2024129-2	Share proposals for SDOH, interventions and follow-ups	Sparked Team			
	with the group to receive feedback				
2024129-3	Share feedback on the proposed data models for SDOH,	All CDG Members			
	interventions and follow-up				

Attendees

1. Aleksander Stojkovski	2. Kylynn Loi
3. Alvin Lai	4. Liam Rivett
5. Andrew Donald	6. Lily Shao
7. Angus Millar	8. Lisa Kalman
9. Averil Tam	10. Liz Keen
11. Cailin Jordan	12. Madison Black
13. Carly Dober	14. Michael Osborne
15. Charlotte Hespe	16. Michael Wilson
17. Charlotte Howard	18. Michelle Dobie
19. Chris Moy	20. Natalie Turner
21. Dalisay Giffard	22. Natasha Radcliffe
23. Darrell Duncan	24. Nicholas Ferris
25. David Wiebe	26. Nyree Taylor
27. Deborah Wise	28. Oliver Frank
29. Desleigh Smith	30. Olivia Carter
31. Dusi Bojicic	32. Peter Shandley
33. Heath Frankel	34. Rachel Hayhurst
35. Heather Leslie	36. Reg Cowie
37. Jackie O'Connor	38. Rob Hosking
39. James Griffin	40. Roisin Scully
41. Janney Wale	42. Sally Rees
43. Jessica Brown	44. Simon Gibson
45. Jillian Kehoe	46. Stephen Chu
47. Karen Casella	48. Steven Fullagar
49. Karine Miller	50. Susan Sheehan
51. Katharine Bassett	52. Tor Bendle
53. Kim Drever	54. Vicki Bennett
55. Kimberley Hilton
